Professional Summary

Software engineer with 2 years building and running production REST APIs and serverless AWS systems (Lambda, API Gateway, CloudFormation, CloudWatch) for a healthcare client. Handled AWS-side incident response and owned CI/CD releases end to end, working directly with the client and closely with the Salesforce team. Also builds full-stack apps (TypeScript, React, Next.js) and RAG pipelines (FastAPI, ChromaDB, Gemini).

Skills

Languages & Frameworks: Python, Java, JavaScript, TypeScript, SQL, React.js, Next.js, Node.js, Express.js, FastAPI, HTML5, CSS3, Tailwind CSS

AI & LLM: RAG pipelines, semantic chunking, vector search, embeddings (Voyage AI), Google Gemini API, HuggingFace Transformers, TensorFlow

Cloud Platforms: AWS (Lambda, API Gateway, CloudFormation, CloudWatch, CodePipeline), Microsoft Azure

DevOps & Tools: CI/CD, Infrastructure as Code (CloudFormation), Git, GitHub, Docker, Kubernetes, Postman

Databases: PostgreSQL, Supabase, ChromaDB

Practices: Incident resolution & root-cause analysis, direct client communication, cross-team collaboration, Agile/Scrum

Professional Experience

Accenture, Associate Software Engineer

Jun 2024 – Jul 2026

- Designed and built a Python reprocessing system with automated failure detection and retry, recovering 200,000+ failed healthcare-enrollment transactions and cutting manual reprocessing effort by 60%.
- Shipped and supported 23 REST API endpoints (Node.js, Python) on AWS Lambda behind API Gateway, with data integrations handling up to 15K requests a day for a healthcare client.
- Cut failure detection from a multi-day cross-team escalation loop to minutes by tracing silent enrollment drops to Lambda throttling and adding CloudWatch alarms and log-metric filters on every endpoint.
- Owned CI/CD for all Lambda functions end to end: authored CloudFormation templates (infrastructure as code) and ran every enhancement and fix release through AWS CodePipeline.
- Handled all AWS-side production incidents as the team's only AWS engineer, working directly with the client and 2 vendor teams, including extensive work with the Salesforce team on call-routing issues; led root-cause analysis on Lambda/API Gateway failures and documented fixes for technical and non-technical stakeholders.

Projects

Askive — Document Q&A (RAG) Web App

Python, FastAPI, ChromaDB, Voyage AI, Gemini

- Built a full-stack LLM-powered app solo in 3 weeks that ingests PDF, DOCX and TXT files and answers natural-language questions grounded in the document, citing the source passages with every answer.
- Cut query response time from 5+ minutes to under 10 seconds by isolating the LLM call to rule out provider latency, then moving the blocking call off the FastAPI event loop.
- Eliminated rate-limit failures on upload by chunking documents at topic boundaries using similarity between sentence embeddings, and batching all chunk embeddings into a single Voyage AI request.

Lantern — Personal Journaling Web App

Next.js, TypeScript, Supabase, PostgreSQL

- Built and deployed a full-stack journaling app with passwordless magic-link authentication and full CRUD for entries (tags, favorites, image attachments) on PostgreSQL via Supabase.
- Enforced per-user data isolation with PostgreSQL Row Level Security policies, so each user can only read and write their own entries.
- Designed a calendar-based dashboard with date and keyword search over entries, backed by real-time sync from Supabase.

Sign Language Recognition System — Group Project

Python, TensorFlow, OpenCV, gTTS

- Built the CNN classifier and Python front-end for a real-time ASL recognition system on a 4-person team, reaching 94% accuracy across 26 alphabet signs with sub-1.5-second gesture-to-audio translation.

Education

Pimpri Chinchwad College of Engineering and Research (PCCOER), Pune, Maharashtra

2020 – Jun 2024

Bachelor of Engineering (Computer Engineering)

CGPA: 8.5/10

Certifications & Leadership

- Certifications: Microsoft Certified: Azure AI Fundamentals (AI-900); Salesforce Certified AI Associate; Python for Data Science, AI & Development (IBM, Coursera).
- Logistics Head, College Literary Club — led logistics for 3 campus-wide events, including a blood donation camp that drew 120+ donors.
